

Darkweb-Everywhere

Chris Barry (@chris__barry)

Colin Mahns (@colinmahns)

What is it?

- Darkweb-Everywhere forces hidden services whenever available
- Inspired by Fortasse's post to the tor-talk mailing list
- Started out as a set of rules that were imported into HTTPS-Everywhere, but is now a full fork of HTTPS-Everywhere.

How does it work?

```
0 <ruleset name="Duckduckgo Onion">
1   <target host="duckduckgo.com" />
2   <target host="www.duckduckgo.com" />
3   <target host="ddg.gg" />
4   <target host="www.ddg.gg" />
5   <rule from="^https?:/(www\.)?(duckduckgo\.com|dgg\.gg)/" to="http://3g2upl4pq6kufc4m.onion/" />
6 </ruleset>
```

- TL;DR –
http(s)://duckduckgo.com => http://3g2upl4pq6kufc4m.onion/
- Currently supporting 100 Tor hidden services, and close to 20 i2p eepsites

Demo time!

TODO.md

- Several bugs have been found in the fork that need to be fixed
 - Sadly, neither of our personal lives have permitted us to work on this
- Find more help
- Find more hidden services!

Want to help? Here's how!

- Run hidden services, and encourage more sites to run hidden services
- Help us with the Firefox extension
 - We really, really could use some help here :)
- “If you care about the topic, you should help them make the tool better.”
 - Roger Dingledine on the Tor Project Blog
